2009 Product of the Year  
Cooke 5/i

Cooke 5/i

Les Zellan astonished cinematographers at IBC by introducing Cooke 5/i primes as well as the anticipated new Panchro /i set. All lenses in the new 5/i Prime Lens Set are T1.4. Focal lengths: 18, 25, 32, 40, 50, 65, 75, 100 and 135mm—designed for all PL-mounted film and digital cameras. They use /i Technology, which is Cooke's open-architecture lens data system. The illuminated focus ring means no more Maglite cigars on night shoots. Tiny LEDs illuminate the focus scales on both sides of the lens, and are dimmable with a control box or wirelessly with a Preston Cinema System FIZ, cemotion control or with a Transvideo Evolution Monitor.
